

Matrox Odyssey XCL

Camera Interface Application Note

PULNiX TM-1325CL

September 3, 2003

Basics about the
camera

Mode of operations as
per Matrox Imaging (in
parentheses as per
camera manufacturer)

Basics about the
interface modes

Camera Descriptions

- Effective resolution: $1390 \times 1040 \times 8\text{-bit}$ @ 15/30 fps (maximum).
- Camera Link BASE interface (single channel).
- Progressive scan.
- Internal sync.
- Internal or external exposure control.
- 25/50 MHz pixel clock rate.

Interface Mode

- Continuous
- Pseudo-continuous
- Asynchronous reset (Pulse width control)

Camera Interface Briefs

Mode 1: Continuous

- $1390 \times 1040 \times 8\text{-bit}$ @ 30 fps.
- Camera Link BASE interface (single channel).
- Progressive scan.
- Matrox Odyssey XCL receiving LDV, FDV, CLK and video signal from camera.
- DCF used: [TM1325CL1390x1040_8bitCon.DCF](#)

Mode 2: Pseudo-continuous

- $1390 \times 1040 \times 8\text{-bit}$.
- Camera Link BASE interface (single channel).
- Progressive scan.
- Matrox Odyssey XCL sending periodic EXPOSURE1 (CC1) signal to camera to initiate and control exposure time.
- Matrox Odyssey XCL receiving LDV, FDV, CLK and video signal from camera.
- DCF used: [TM1325CL1390x1040_8bitPcon.DCF](#)

Basics about the
interface modes

Camera Interface Briefs (cont.)

Mode 3: Asynchronous reset

- 1390 × 1040 × 8-bit.
- Camera Link BASE interface (single channel).
- Progressive scan.
- Matrox Odyssey XCL receiving external trigger signal.
- Matrox Odyssey XCL sending EXPOSURE1 (CC1) signal to camera to initiate and control exposure time.
- Matrox Odyssey XCL receiving LDV, FDV, CLK and video signal from camera.
- DCF used: [TM1325CL1390x1040_8bitAsync.DCF](#)

Specifics about the
interface modes

Camera Interface Details

Mode 1: Continuous

- **Frame Rate:** Matrox Odyssey XCL receives the continuous video from the camera at 30 frames per second at full resolution.
- **Exposure time:** Exposure time is determined by the shutter setting. Refer to the camera manual for more information.
- **Camera Control Software settings:** Shutter mode and Scan mode set to No Shutter and 30 FPS respectively. Camera Control Software version 3.2 or higher can be used.

Mode 2: Pseudo-continuous

- **Frame Rate:** For this DCF, the Matrox Odyssey XCL receives the pseudo-continuous video from the camera at about 22 frames per second (22.35 Hz) for full resolution.
- **Exposure time:** Exposure time is determined by the inactive period of Timer1 setting in the DCF. It is recommended that the active period of Timer1 be set to greater than one frame duration (**35.8 ms**). The default exposure time in this DCF is **7 ms**, which can be modified using Matrox Intellicam, with the ONL imCamControl() or imDigControl() function, or with the MIL MdigControl() function. Refer to the respective manual for more information.
- **Camera Control Software settings:** Shutter mode and Scan mode set to Async and 30 FPS respectively. Shutter switch set to 9 or EXT.PW CONTROL. Camera Control Software version 3.2 or higher can be used.

interface modes

Camera Interface Details (cont.)

Mode 2: Pseudo-continuous

▪ Timings diagram:

* Active period of Timer1 should be greater than one frame duration (35.8 ms)

Mode 3: Asynchronous reset

- **Frame Rate:** The frame rate is determined by the frequency of the external trigger signal. The period between external TTL trigger signals must be larger than the total duration of the exposure time (inactive period of Timer1) plus the time for one frame (> 35.8 ms).
- **Exposure time:** The width (falling edge to rising edge) of the EXPOSURE1 (CC1) signal is the exposure time. The default exposure time in this DCF is **7 ms**, which can be modified using Matrox Intellicam, ONL imCamControl() or imDigControl() function, or with the MIL MdigControl() function. Refer to the respective manual for more information.
- **Camera Control Software settings:** Shutter mode and Scan mode set to Async and 30 FPS respectively. Shutter switch set to 9 or EXT.PW CONTROL. Camera Control Software version 3.2 or higher can be used.

Cabling details for the
interface modes

Cabling Requirements

Modes 1 and 2: Continuous and Pseudo-continuous

- **Cable and Connection:** Standard Camera Link cable.

*Cabling details for the
interface modes*

Cabling Requirements (cont.)

Mode 3: Asynchronous reset

- **Cable and Connection:** Standard Camera Link.
- **External trigger:** External trigger should be connected to the OPTO TRIG input of the 9-pin connector (pins 7 and 2) on the Expanded I/O adapter bracket.

EXPANDED I/O BRACKET (9-pin connector)

		External Trigger Source	
OPTOTRIG +	07	←	SIGNAL --
OPTOTRIG -	02	←	GROUND --

The DCF(s) mentioned in this application note can be found on our FTP site (<ftp.matrox.com/pub/imaging/>). The information furnished by Matrox Electronics System, Ltd. is believed to be accurate and reliable. Please verify all interface connections with camera documentation or manual.
