Specifics about the interface modes

### Camera Interface Details

#### Mode 1: Continuous

- **Frame rate:** Matrox Solios eCL/XCL receives the continuous video from the camera at 20 frames per second.
- **Exposure time:** Exposure time is set using the integration time setting in the Camera Configuration utility. Refer to the camera manual for more information.

*Specifics about the interface modes*

### Camera Interface Details (cont.)

#### *Mode 1: Continuous*

- **Camera control settings:** Set the camera using the Sentech SOF-Cube Camera Configuration Utility as follows: Trigger Mode = Normal | Output Mode = 10-bit

#### *Mode 2: Pseudo-continuous*

- **Frame rate:** The frame rate is determined by the frequency of the TIMER1 OUT (CC1) signal.
- **Exposure time:** The TIMER1 OUT (CC1) signal's active duration initiates and controls the exposure time, which can be modified in the DCF using Matrox Intellicam or with the MIL MdigControl() function. Consult the respective manual for more information.
- **Camera control settings:** Set the camera using the Sentech SOF-Cube Camera Configuration Utility as follows: Trigger Mode = Pulse Width Trigger | Output Mode = 10-bit | Trigger Reset Mode = V-Reset

#### *Mode 3: Asynchronous Reset*

- **Frame rate:** The frame rate is determined by the frequency of the external trigger signal. The period between the external trigger signals must be larger than the frame readout period plus the exposure time.
- **Exposure time:** Refer to Mode 2: Pseudo-continuous.
- **Camera settings:** Refer to Mode 2: Pseudo-continuous.

### Cabling Requirements

#### *Mode 1 and 2: Continuous and Pseudo-continuous*

- **Cable and Connection:** One Standard-To-Mini Camera Link cable.
