<b>Camera Interface Details</b>	<p><b>Modes 1 : Pseudo-continuous</b></p> <ul style="list-style-type: none"><li>• <b>Frame rate:</b> Matrox Genesis receives the pseudo-continuous video from the camera at a frame rate equal to 10 frames per second.</li><li>• <b>Exposure time:</b> Exposure time is inversely proportionate to the frame rate (no shutter) or determined by the shutter setting. Refer to the camera manual for more information.</li></ul> <p><b>Mode 2: Asynchronous Reset (Pulse Width Control Mode)</b></p> <ul style="list-style-type: none"><li>• Once it has received the external trigger signal, Matrox Genesis sends the EXPOSURE1 (EXSYNC) signal to the camera with a width equal to the desired exposure.</li><li>• <b>Frame rate:</b> The frame rate is determined by the frequency of the external trigger signal.</li><li>• <b>Exposure time:</b> The active and inactive periods of the EXPOSURE1 (EXSYNC) signal is the exposure time. The default exposure time for this DCF is equal to <b>3.82 ms</b>. In order to change the width and deployment time of the EXPOSURE1 (EXSYNC) use the Exposure Settings menu tab in Matrox Intellicam. Consult the Matrox Intellicam User Guide for more information.</li></ul> <p><b>Modes 1 and 2</b></p> <ul style="list-style-type: none"><li>• <b>Camera configuration:</b> Camera configuration tool and drivers for this camera are available from the BASLER web site (<a href="http://www.baslerweb.com/">http://www.baslerweb.com/</a>).</li></ul>

### Cabling Requirements (continued)

#### Mode 2: Asynchronous Reset

- DBHD100-TO-OPEN and IMG-7W2-TO-5BNC cables, and GEN/DIG/BRD/L/\_ board required for digital data, synchronization and control signals.
- External trigger source should be connected to the trigger input (GRAY BNC) of the IMG-7W2-TO-5BNC cable.
- All other connections are as in Mode 1: *Pseudo-continuous*

#### Modes 1-2

- Connections between the 2-pin subminiature round connector on the rear panel of the camera and the power supply are as follows:

#### Power Supply

#### BASLER A101 (2-pin connector)

<i>Pin name</i>	<i>Pin no.</i>	<i>Pin name</i>	<i>Pin no.</i>
+24V	03	GND	01
+24V	04	GND	02

- Connections between the DB-9 connector on the rear panel of the camera and the system (RS-232 interface) are as follows:

Pin	Signal
2	RxD
3	TxD
5	GND
1, 4, 6, 7, 8, 9	NOT CONNECTED
