Basics about the camera

Camera Descriptions

- Effective resolution: up to 4096 pixels/line @ 17.7k line per second.
- Camera Link BASE or MEDIUM interface (RGB 8-bit, dual RGB 8-bit, RGB 12-bit).
- Tri-linear RGB line scan.
- External and internal sync.
- External or internal exposure control.
- 40 or 80 MHz pixel clock rate.

Interface Mode

- Fixed line scan rate¹
- Variable line scan rate²
- Variable line scan rate using the Rotary Encoder²
- Fixed line scan rate with frame trigger¹
- Variable line scan rate with frame trigger²
- Variable line scan rate using the Rotary Encoder with frame trigger²
- Fixed line scan rate with variable frame size¹
- Variable line scan rate with variable frame size²
- Variable line scan rate using the Rotary Encoder with frame trigger²

Mode of operations as per Matrox Imaging (in parentheses as per camera manufacturer)

Camera Interface Briefs

Mode 1: Fixed line scan rate

- Up to 4096 pixels/line.
- Camera Link BASE or MEDIUM interface (RGB 8-bit, dual RGB 8-bit, RGB 12-bit).
- DCF configured for 1000 lines per virtual frame.
- Matrox Odyssey Xpro sending periodic EXPOSURE1 (EXSYNC) signal to camera.
- Matrox Odyssey Xpro receiving HSYNC (LVAL), PIXEL CLOCK (STROBE @ 40 or 80 MHz) and video data from camera.
- DCF used: [PC3x04k80_4096_8bitRGB_FLS.DCF](#)
- DCF used: [PC3x04k80_4096_8bit2Taps_RGBFLS.DCF](#)
- DCF used: [PC3x04k80_4096_12bitRGB_FLS.DCF](#)

Specifics about the
interface modes

Camera Interface Details

Mode 1: Fixed line scan rate

- **Line rate:** The frequency of the periodic EXPOSURE1 (EXSYNC) signal determines the camera's line rate. For the RGB 8-bit DCF used for the **Smart EXSYNC** mode, the EXPOSURE1 (EXSYNC) signal period is set to **150 μ s** which translates into a **6.66 kHz** line rate. The maximum line rate for this camera equals **17.7 kHz**.
- **Exposure time:** The exposure time is the inactive (high level) period between the rising and falling edges of the EXPOSURE1 (EXSYNC) signal. The default exposure time for the RGB 8-bit DCF used for **Smart EXSYNC** mode equals **100 μ s**. Maximum/minimum exposure time per line for this DCF is **420 ms** and **25 ns** respectively. The exposure time can be modified in the DCF using Matrox Intellicam, ONL imCamControl() or imDigControl() function, or with the MIL MdigControl() function. Consult the respective manual for more information.

Specifics about the
interface modes

Camera Interface Details

Mode 1: Fixed line scan rate

- **Camera communication:** These DCFs will work with **Free Run** and **Smart EXSYNC** modes. Set the mode (as shown in table below) via the Camera Link communication. Refer to the camera manual for additional information.

Command	Short Form	Parameter	Description
Set_exposure_mode	sem	2	Free Run
Set_exposure_mode	sem	4	Smart EXSYNC mode
Camera_link_mode	clm	16	RGBY, 12bit
Camera_link_mode	clm	5	RGB, 8bit
Camera_link_mode	clm	14	2xRGB, 8bit

- **Timing diagram:**

Mode 2: Variable line scan rate

- **Line rate:** The line rate is controlled by the frequency of the external TTL line trigger signal. The line trigger signal period must be larger than the total duration of the exposure time (high level duration of the timer), the internal delay of the camera ($\approx 2.5 \mu\text{s}$) or slower than the maximum line read of the camera.
- **Exposure time:** Refer to Mode 1: Fixed line scan rate.
- **Camera communication:** Set the mode (as shown in table below) via the Camera Link communication. Refer to the camera manual for additional information.

Command	Short Form	Parameter	Description
Set_exposure_mode	sem	4	Smart EXSYNC mode
Camera_link_mode	clm	16	RGBY, 12bit
Camera_link_mode	clm	5	RGB, 8bit
Camera_link_mode	clm	14	2xRGB, 8bit

- **Timing diagram:**

Specifics about the
interface modes

Camera Interface Details (cont.)

Mode 3: Variable line scan rate with rotary encoder

- **Line/frame rate:** The line rate is controlled by the frequency of the external LVDS line trigger signal with a Rotary Encoder format. With the Rotary Encoder approach, it is possible to force a certain decimation value to grab a line every x number of pulses from the line trigger (combination of the A and B signals). The line trigger signal controlled by the decimation value must be larger than the total duration of the exposure time (high level duration of the timer), the internal delay of the camera ($\approx 2.50 \mu\text{s}$) or slower than the maximum line rate of the camera. The DCF is designed for a forward direction from the Rotary Encoder.
- **Exposure time:** Refer to Mode 1: Fixed line scan rate.
- **Camera communication:** Refer to Mode 2: Variable line scan rate.
- **Timing diagram:**

* The decimation value showed in this timing diagram is eight (8).

Mode 4: Fixed line scan rate with frame trigger

- **Line/frame rate:** The line rate is fixed and controlled by the period of EXPOSURE1 (EXSYNC) signal. The virtual frame rate is variable and controlled by the period of the external frame trigger signal, however the external trigger period must always be greater than the total time of the number of lines captured. The number of lines per virtual frame (maximum of 1000 for the DCFs) is fixed and controlled by the vertical timing of the DCF. Capture of the lines will start with the rising edge of the frame trigger signal.
- **Exposure time:** Refer to Mode 1: Fixed line scan rate.
- **Camera communication:** Refer to Mode 1: Fixed line scan rate.

Cabling details for the
interface modes

Cabling Requirements

Mode 1: Fixed line scan rate

- **Cable and Connection:** Standard Camera Link cable.

Mode 2: Variable line scan rate

- **Cable and Connection:** Standard Camera Link.
- **External trigger:** External line trigger should be connected to the 9-pin (OPTO TRIG input) connector on the External I/O adapter bracket:

EXTERNAL I/O BRACKET

(9-pin connector)

Pin Name	Pin no.		External Trigger Source Pin Name
OPTO_AUX_IN0 +	07	←	LINE TRIGGER (TTL FORMAT)
OPTO_AUX_IN0 -	02	←	LINE TRIGGER (GROUND)

Mode 3: Variable line scan rate with rotary encoder

- **Cable and Connection:** Standard Camera Link.
- **External trigger:** External line trigger should be connected to the 9-pin and 44-pin connectors on the External I/O adapter bracket:

EXTERNAL I/O BRACKET

(9-pin connector)

Pin Name	Pin no.		External Trigger Source Pin Name
P0_LVDS_AUX_IN0 +	08	←	Line TRIGGER A + (LVDS FORMAT)
P0_LVDS_AUX_IN0 -	03	←	Line TRIGGER A - (LVDS FORMAT)

(44-pin connector)

Pin Name	Pin no.		External Trigger Source Pin Name
P0_LVDS_AUX_IN1 +	37	←	Line TRIGGER B + (LVDS FORMAT)
P0_LVDS_AUX_IN1 -	23	←	Line TRIGGER B - (LVDS FORMAT)

Mode 4: Fixed line scan rate with frame trigger

- **Cable and Connection:** Standard Camera Link.
- **External trigger:** External line trigger should be connected to the 9-pin (OPTO TRIG input) connector on the External I/O adapter bracket:

EXTERNAL I/O BRACKET

(9-pin connector)

Pin Name	Pin no.		External Trigger Source Pin Name
OPTO_AUX_IN1 +	04	←	FRAME TRIGGER (TTL FORMAT)
OPTO_AUX_IN1 -	05	←	FRAME TRIGGER (GROUND)
