

Matrox Odyssey Xpro

Camera Interface Application Note

Photonfocus MV-D1024-80-CL-8 June 15, 2006

*Basics about the
camera*

Camera Descriptions

- Effective resolution: $1024 \times 1024 \times 8\text{-bit}$ @ 75 fps.
- Camera Link BASE interface (8-bit, dual tap).
- Progressive scan.
- Internal sync.
- Internal exposure control.
- 40 MHz pixel clock rate.

Interface Mode

- Continuous (Free Running)
- Pseudo-continuous (Trigger)
- Asynchronous reset (Trigger)

Camera Interface Briefs

Mode 1: Continuous

- $1024 \times 1024 \times 8\text{-bit}$ @ 75 fps.
- Camera Link BASE interface (8-bit, dual tap).
- Matrox Odyssey Xpro receiving LVAL, FVAL, PIXEL CLOCK (CLK @ 40 MHz) and video from camera.
- DCF used: [MVD102480CL8_1024x1024_8bit2tapCon.DCF](#)

Mode 2: Pseudo-continuous

- $1024 \times 1024 \times 8\text{-bit}$.
- Camera Link BASE interface (8-bit, dual tap).
- Matrox Odyssey Xpro sending EXPOSURE1 (CC1) signal to camera to initiate and control the exposure.
- Matrox Odyssey Xpro receiving LVAL, FVAL, PIXEL CLOCK (CLK @ 40 MHz) and video from camera.
- DCF used: [MVD102480CL8_1024x1024_8bit2tapPcon.DCF](#)

*Specifics about the
interface modes*

Camera Interface Details

Mode 1: Continuous

- **Frame rate:** Matrox Odyssey Xpro receives the continuous video from the camera at 75 frames per second. To increase the frame rate, reduce exposure time in the PhotonFocus PFRemote Camera Configuration utility (PFRemote.EXE).
- **Exposure time:** Exposure time is determined by the **Exposure Time Field** setting in the PFRemote utility. Refer to the camera manual for more information.
- **Camera settings:** The camera mode is set to the following setting in the PFRemote utility. Refer to the camera manual for more information.

Mode	Setting
Trigger	Free Running
Output	8-bit
Constant Frame Rate	unchecked

Mode 2: Pseudo-continuous

- **Frame rate:** The frame rate is determined by the frequency of the EXPOSURE1 (CC1) signal.
- **Exposure time:** The EXPOSURE1 (CC1) signal active duration (high to low) initiates and controls the camera's internal exposure time. To modify the exposure time, in Matrox Intellicam change the **Timer 1** value in the DCF or use the MIL MdigControl function. Refer to the MIL on-line Help for more information.
- **Camera settings:** The camera mode is set to the following setting in the PFRemote utility. Refer to the camera manual for more information.

Mode	Setting
Trigger	External Trigger
Output	8-bit
SYNC Pulse Active High	checked
Combined trigger/exposure	checked
Constant Frame Rate	unchecked

Specifics about the
interface modes

Camera Interface Details (cont.)

Mode 3: Asynchronous Reset

- **Frame rate:** The frame rate is determined by the frequency of the external trigger signal. The period between the external trigger signals must be larger than the frame readout period and the exposure time.
- **Exposure time:** Refer to Mode 2: Pseudo-continuous.
- **Camera settings:** Refer to Mode 2: Pseudo-continuous.

Cabling details for the
interface modes

Cabling Requirements

Mode 1 and 2: Continuous and Pseudo-continuous

- **Cable and Connection:** Standard Camera Link cable.

Mode 2: Asynchronous reset

- **Cable and Connection:** Standard Camera Link.
- **External trigger:** External trigger should be connected to the OPTO TRIG input of the 9-pin connector (pins 7 and 2) on the Expanded I/O adapter bracket.

EXPANDED I/O BRACKET (9-pin connector)

			External Trigger Source	
OPTOTRIG +	07	←	SIGNAL	--
OPTOTRIG -	02	←	GROUND	--

The DCFs mentioned in this application note are also attached (embedded) to this PDF file – use the Adobe Reader's View File Attachment to access the DCF files.
